Assembly Instructions

Floral Wall Mounted Water Feature

ASSEMBLY STEPS

1. Place the water pump into the water basin, then thread the pump’s power cord through the middle layer.

2. Route the power cord to the back and position it within the designated opening at the rear.

3. Connect the flexible hose to the water pump. Fill the basin with an appropriate amount of water, position the mesh splash guard, then connect the power cord.

CARE & SAFETY

• Clean the fountain with a soft cloth. Do not use acidic or alkaline cleaning products; these may damage the painted finish.

• Change the water regularly and prevent leaves or other debris from collecting in the reservoir.

• If water stops flowing, switch the pump off and back on. If needed, disconnect the power and inspect the hose for blockages.

• Always disconnect the power supply before cleaning, inspecting or handling the pump.
